

NikkoAM-ICBCSG China Bond ETF

A quality brew of strength and depth

About the index

The ChinaBond ICBC 1-10 Year Treasury and Policy Bank Bond Index

The ChinaBond ICBC 1-10 Year Treasury and Policy Bank Bond Index invests into China government bonds, and bonds issued by policy banks such as Agricultural Development Bank of China, China Development Bank, and Export-Import Bank of China.

In addition to China Government Bonds, you will have access to these China Policy Bank Bonds:

100% government owned financial institutions that are responsible for financing state led development projects.	
China Development Bank	Support large-scale national projects such as infrastructure development, basic industries, energy and transport
Agricultural Development Bank of China	Support development of agricultural projects and rural areas
Export-Import Bank of China	Support China's foreign trade, cross-border investment, the Belt and Road Initiatives (BRI), international industrial capacity and equipment manufacturing cooperation

Why invest in NikkoAM-ICBCSG China Bond ETF?

1
Strength and growth of the China bond market

2
Internationalisation of the RMB

3
Higher risk-adjusted returns

4
Competitive yields relative to China government bonds

5
Uses leading pricing and index provider for China's bond market

1. Strength and growth of the China bond market

Access to China's bond market

The world's 2nd largest bond market and one of the most liquid markets in the world.

Figure 1: China – second largest bond market in the world (USD tn)

Source: BIS, Q3 2024

Increased foreign participation

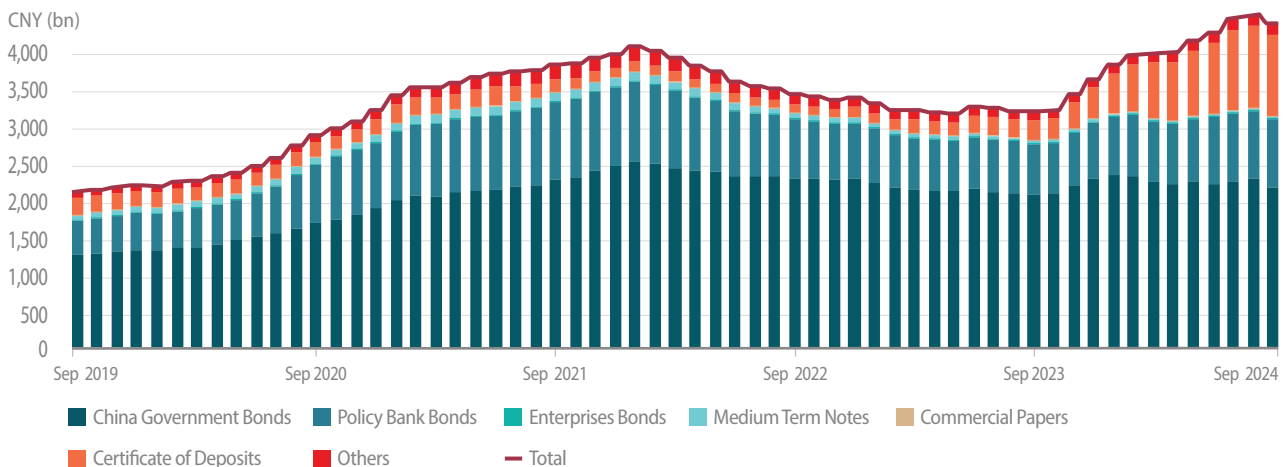

In recent years, foreign participation into the Chinese government bond market has demonstrated evident increase. With the opening of the China Interbank Bond Market (CIBM), Global Bond indices have started to include China bonds and this accessibility is expected to drive further foreign investments into this asset class.

2. Internationalisation of the RMB

The RMB has seen increased importance on the global stage across time. China's cross-border yuan usage in international trade deals has grown significantly from 2017 - 2022, as shown in Fig 4 below.

Figure 4: Cross-border yuan use grows for five straight years (in trillion yuan)

Source: People's Bank of China, Caixin, The National News, 5 Apr 2023

In 2022, about 42 trillion yuan worth of China's cross-border payments and receipts were settled in the Chinese currency, up 15% from the previous year, and marking the fifth straight annual increase.

In March 2023, the yuan also became the most widely-used currency for cross-border transactions in China and overtook the dollar for the first time, reflecting efforts to internationalise use of the yuan.

Potential for greater RMB representation in world reserves

The RMB represents approximately 12% of the International Monetary Fund's (IMF) Special Drawing Rights (SDR). The SDR is an international type of monetary reserve asset created by the IMF in 1969 that operates as a supplement to existing money reserves of member countries.

However, only approximately 2% of current world reserves are held in RMB, which could suggest potential for the RMB to continue growing in weight within the world reserves.

3. Higher risk-adjusted returns

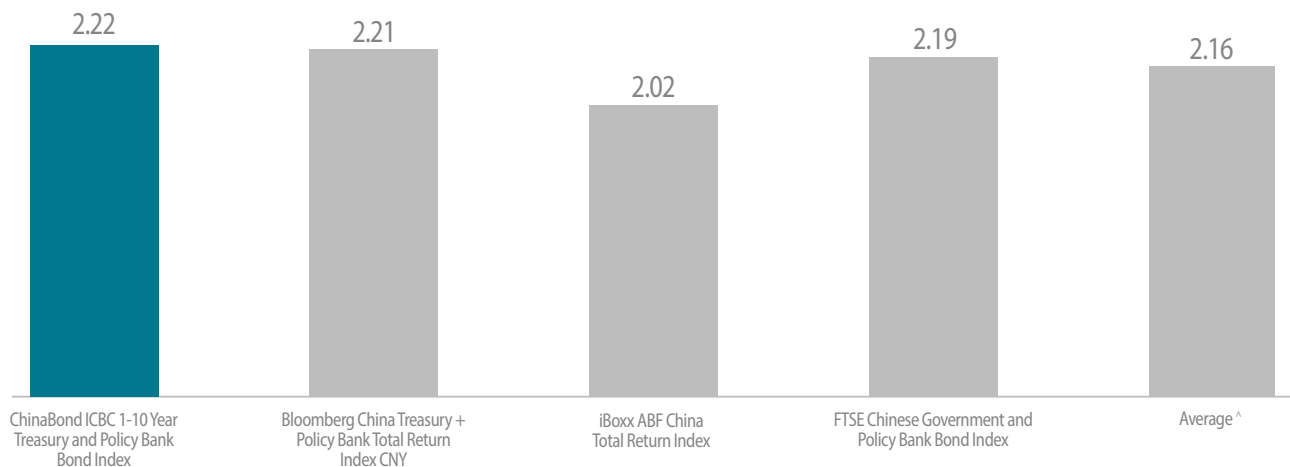

Short term bonds typically have lower volatility. We have designed the ETF to track an index comprising of bonds with maturity of less than 10 years, resulting in higher risk-adjusted returns.

ChinaBond ICBC 1-10 Year Treasury and Policy Bank Bond Index	
Date	30 Sep 2024
Market Size (RMB tn)	40.9
Number of Bonds	221
Duration (years)	4.18 years
Yield to Maturity (%)	2.01%
3 Year Returns (annualised)	4.11%
3 Year Volatility (annualised)	1.32%
5 Year Returns (annualised)	4.06%
5 Year Volatility (annualised)	1.83%

Source: Nikko AM, China Bond Pricing Center, Bloomberg as of 30 Sep 2024

Performance of the index presented here is not exactly the same as that of the corresponding or related ETFs. Index performance does not factor in any management fee, transaction costs or fund expenses of an ETF. Past performance is not necessarily indicative of the future performance.

Figure 7: Risk-adjusted returns (%)*

Source: Nikko Asset Management, Bloomberg, as of 30 Sep 2024

* Risk-adjusted Returns defined as 5 year annualised returns divided by 5 year annualised volatility

^ The average risk-adjusted returns is derived by calculating the simple average of the risk-adjusted returns of the four above-mentioned indices

For the purpose of illustrating that short term bonds have a lower volatility and therefore higher risk-adjusted returns, the 3 indices chosen for comparison purposes tracks bonds that are not limited to a maturity of 10 years. The bond issuers are however similar, comprising of bonds issued by the China Government as well as policy banks. iBoxx ABF China Total Return Index also includes bonds issued by China Quasi-Sovereign entities.

4. Competitive yields relative to Chinese government bonds

China policy banks are quasi-sovereign entities that are 100% owned by the Chinese government. The bond yields are competitive relative to Chinese government bonds. Comparing the most liquid portions of the yield curve (i.e. 5-year and 10-year), the average yield pick-ups are approximately 15 bps and 10 bps respectively as at 30 Sep 2024.
